**Tabulations From a Survey of California Registered Voters About Their
Opinions of Proposition 13 Thirty Years After its Passage**

*- prepared for -
Capitol Alert*

June 6, 2008

Introduction

This volume presents the statistical data developed from a *Field Poll* survey of California registered voters about their opinions of Proposition 13 thirty years after its passage. *The Field Poll* is an independent and non-partisan survey of public opinion in California established in 1945 by Mervin Field. Reports of *The Field Poll*, typically published 30-50 times per year, cover a wide range of political, and political topics. Many of California's leading media properties and news organizations publish and broadcast the results of each *Field Poll* report as feature or breaking news stories in their respective publications and broadcasts. All new and previous reports since 1995 are available to the public through its online archives at www.field.com/fieldpollonline. *The Field Poll* is owned and operated by Field Research Corporation, with headquarters in San Francisco, California.

The results contained in this report are based on a *Field Poll* survey completed among a representative sample of 1,052 registered voters statewide. In order to cover a broad range of issues, the overall sample was divided into two random subsamples of 502 voters and 550 voters on some questions. All interviewing was conducted during the period May 17-26, 2008 by telephone in English and Spanish.

Sample Frame

Voters in the survey were selected randomly from a listing of California's statewide voter registration rolls. The list used by Field provides a telephone number for about 90% of the state's registered voters. These telephone numbers come from a variety of sources, including telephone numbers included by the voter on the his/her official voter registration form, as well as through cross-referencing voter names and addresses against recent telephone directories and other telephone matching services. While the telephone numbers are primarily landline telephone numbers, these phone listings also include cell phones, whenever a cell phone number is provided by the voter when registering or in other settings accessible through telephone matching services. Thus, cell phones are not systematically excluded from the sample frame. Special procedures were used in the survey when contacting voters on their cell phones to include them into the survey sample.

Data Collection

Prior to the start of data collection, professionally-trained telephone interviewers were briefed with regard to the survey's proper calling and interviewing procedures by the Study Director. This session provided both interviewers and supervisors with an overview of the study and includes a question-by-question review of all items in the survey. Interviewers then completed all survey interviews by telephone through the computer-assisted telephone interviewing (CATI) system. CATI controls the telephone scripts read to individual respondents by displaying the appropriate questionnaire items and their valid response code alternatives in their proper sequence on computer screens at each interviewer's booth. The interviewer then reads each question aloud to the respondent from the screen and enters each respondent's pre-coded answer category through the keyboard directly to a computer disk. All answers are automatically stored in computer memory.

In order to bring hard-to-reach respondents into the survey, up to six attempts (an initial call plus five callbacks) were made to each telephone number selected for inclusion into the sample. Callbacks were made at different times and on different days to increase the probability of finding adults available for the interview. Where possible, appointments are made at specified dates and times to maximize convenience and cooperation rates.

Data Processing

Because CATI itself provides for the direct data entry of responses by the interviewer and does not permit ineligible or invalid data entries, the data file resulting from CATI interviewing is itself virtually error-free.

Following this, a final series of data checks were performed by means of a specially designed cleaning program that scrutinizes each respondent record for internally inconsistent information. Once the data were determined to be clean and error-free, the sample was weighted slightly to align it to known estimates of the demographic and regional characteristics of the state's registered voter population. Please note that the bases shown throughout the tabulations in this report are weighted bases and differ slightly from the actual number of respondents interviewed within each subgroup.

Guide to Reading the Tables

The following is an explanation of the detailed statistical tabulations contained in this report:

- The question or questions upon which the data are based is shown at the top of each table
- Tables are percentaged vertically with the raw percentage base appearing at the top of each column.
- The data have been weighted to known parameters of the statewide registered voter population. All percentages and frequencies reported in each table are therefore weighted tabulations.
- In instances where percentages are calculated on small bases (e.g., when the unweighted base is fewer than 100 respondents) the reader is urged to interpret the data with caution, since results are subject to relatively large levels of sampling error.
- Throughout the tables an asterisk is used to denote a value of less than 1/2 of 1%. A hyphen indicates zero value. On some tables the percentages may add to more than 100% due to multiple mentions.
- Bases of subgroups used in the tabulations may add to less than the total number of respondents due to some respondents not reporting that characteristic.

Subgroup Definitions

The following are some of the definitions applicable to some of the voter subgroups reported in this volume:

Area

Southern California: Los Angeles, Orange, Riverside, San Bernardino, San Diego, Imperial, Santa Barbara, Ventura, Kern, and San Luis Obispo counties

Northern California: all other 48 California counties

Coastal Counties: San Diego, Orange, Los Angeles, Ventura, Santa Barbara, San Luis Obispo, Monterey, Santa Cruz, San Mateo, San Francisco, Contra Costa, Alameda, Marin, Napa, Solano, Sonoma, Santa Clara, Mendocino, Humboldt and Del Norte counties

Inland counties: all other 38 California counties

Region

Los Angeles: Los Angeles County

San Diego/Orange: San Diego County and Orange counties

Other South: San Bernardino, Riverside, Imperial, Ventura, Santa Barbara, and San Luis Obispo

SF Bay Area: San Francisco, Marin, Napa, Sonoma, Solano, Contra Costa, Alameda, Santa Clara and San Mateo

Central Valley: Butte, Colusa, Fresno, Glenn, Kern, Kings, Madera, Merced, Placer, Sacramento, San Joaquin, Shasta, Stanislaus, Sutter, Tehama, Tulare, Yolo, and Yuba

Other North: Alpine, Amador, Calaveras, Del Norte, El Dorado, Humboldt, Inyo, Lake, Lassen, Mariposa, Mendocino, Monterey, Modoc, Mono, Nevada, Plumas, San Benito, Santa Cruz, Sierra, Siskiyou, Trinity, and Tuolumne

All other subgroups are based on demographic variables or are derived from questions asked in the survey.

Estimates of Sampling Error

In any survey based on a sampling, there is some sampling error introduced into the data by the process of sampling itself. When the sample has been drawn using random processes, it is possible to apply probability principles to determine the potential range of such error. While survey samples of human populations rarely, if ever, meet all of the criteria theoretically required for the application of these principles, it is customary to use them as an approximation of error that is introduced as a result of sampling. The table below shows the range of error that is associated with samples of various sizes, assuming the use of the 95% confidence level, which is customary for most public opinion surveys. For example, if 50% of a sample of overall sample of 1,052 registered voters interviewed answered “yes” to a specific question, this statistic would have a sampling error of plus or minus 3.2 percentage points at the 95% confidence level. This means that there is a 95% chance that had the entire population of registered voters statewide been interviewed using the same questionnaire and methods, the results of such a census would yield a result between 46.8% and 53.2%. The same procedure can be used to estimate the sample error ranges of any other statistic contained in this report.

Approximate <u>sample size</u>	<u>Approximate percentage distribution of replies to question</u>				
	<u>10%</u>	<u>30%</u>	<u>50%</u>	<u>70%</u>	<u>90%</u>
100	+/- 6.0	+/- 9.2	+/- 10.0	+/- 9.2	+/- 6.0
200	+/- 4.3	+/- 6.5	+/- 7.1	+/- 6.5	+/- 4.3
400	+/- 3.0	+/- 4.6	+/- 5.0	+/- 4.6	+/- 3.0
500	+/- 2.7	+/- 4.1	+/- 4.5	+/- 4.1	+/- 2.7
700	+/- 2.3	+/- 3.5	+/- 3.8	+/- 3.5	+/- 2.3
1000	+/- 1.9	+/- 2.9	+/- 3.2	+/- 2.9	+/- 1.9

There are many other possible sources of error other than sampling variability in this and any other public opinion survey. Different results could occur because of differences in question wording, sequencing, the rigor with which sampling procedures were implemented, or through undetected errors or omissions in sampling, interviewing or data processing. The Field professionals working on this study did everything possible to minimize such errors.

Questions Asked

Now, I have some questions on the subject of taxes... the questions I have are about state and local taxes, such as state income taxes, sales taxes, property taxes, business and corporation taxes, and state taxes on vehicle registrations, gasoline, tobacco and alcohol.

On the whole, do you feel that the level of state and local taxes that the average citizen like yourself pays are much too high, somewhat high or about right?

Which specific state and local taxes, if any, do you feel are too high? Any others? (DO NOT READ ANSWER CATEGORIES) (ANSWER CAN BE A MULTIPLE)

In general, would you like to see your state and local governments provide more services to the public or provide fewer services to the public? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE A)

In general, would you like to see your state and local governments provide more services to the public even if it means raising your taxes and fees, or provide fewer services to the public if this means that your taxes and fees will kept at or below current levels? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE B)

Thirty years ago in 1978 California voters approved Proposition 13, which reduced local property taxes and limited the amount they could be increased each year. How familiar are you with Proposition 13 – very familiar, somewhat familiar, not too familiar or not at all familiar?

(Based on what anything you may have seen, read or heard about Proposition 13,) if Proposition 13 were up for a vote again today, do you think you would vote in favor of it or vote against it?

Because of Proposition 13, property owners are generally taxed at one percent of the purchase price of a property at the time it is sold. However, because most properties have increased in value since Prop. 13 was passed, this means that long-time property owners typically pay much less in property taxes than neighboring properties of similar value that were bought more recently. Would you approve of disapprove of changing Prop. 13 to gradually raise the property taxes of long-time property owners, so that the amount they pay is more in line with the amount being paid by more recent buyers of similarly valued property? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE A)

Because of Proposition 13, local governments can only increase property taxes by a maximum of two percent per year unless the property is sold. Would you approve or disapprove of changing Prop. 13 to allow your local government to increase property taxes by more than two percent per year? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE B)

Proposition 13 reduced property taxes on both residential and commercial property. Would you approve or disapprove of changing Prop. 13 to permit business and commercial property owners to be taxed at a higher rate than owners of residential property? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE A)

Proposition 13 reduced property taxes on both residential and commercial property. Would you approve or disapprove of changing Prop. 13 to permit owners of residential property to be taxed at a lower rate than business and commercial property owners? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE B)

Proposition 13 generally requires a two-thirds vote of the state legislature to increase taxes. Would you approve or disapprove of changing Prop. 13 to enable the legislature to increase taxes by a simple majority vote? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE A)

Proposition 13 generally requires a two-thirds vote of the state legislature to increase taxes. Given that the state of California is facing a huge budget deficit estimated to be about 14 to 20 billion dollars, would you approve or disapprove of changing Prop. 13 to enable the legislature to increase taxes by a simple majority vote? (ASKED OF A RANDOM SUBSAMPLE OF VOTERS: SAMPLE B)

May 2008 Field Poll

Q.35b Proposition 13 generally requires a two-thirds vote of the state legislature to increase taxes. Given that the state of California is facing a huge budget deficit estimated to be about 14 to 20 billion dollars, would you approve or disapprove of changing Prop. 13 to enable the legislature to increase taxes by a simple majority vote?
