**Tabulations From a Survey of California Registered Voters
About the State Budget Deficit**

*- prepared for the-
Capitol Alert and the Sacramento Bee*

April 30, 2009

Introduction

This volume presents the statistical data developed from a *Field Poll* survey of registered voters in California about their views on what the state should do to deal with its budget deficit. The survey was conducted by *The Field Poll* is an independent and non-partisan survey of California public opinion, with additional grant funding provided by the California HealthCare Foundation to include additional questions on health programs that could be affected by the deficit. The results contained in this report are based on a *Field Poll* survey completed among a representative sample of 901 registered voters in California. All interviewing was conducted April 16-26, 2009 by telephone in English and Spanish.

Sampling

The sample was developed from telephone listings of individual voters selected randomly from a listing of statewide voter registration rolls. Once a voter's name and telephone had been selected interviewers are attempted only with the specified voter. Interviews can be conducted on either the voter's landline or cell phone, depending on the source of the telephone listing from the voter file. For this survey, the sample was stratified so as to yield interviews with approximately equal numbers of Democrats and Republicans. After the completion of interviewing, the results were weighted to return this disproportionate sample allocation to the actual distribution of registered voters by party and by various other demographic and regional characteristics of the state's registered voter population.

Data Collection

Prior to the start of data collection, professionally-trained telephone interviewers were briefed with regard to the survey's proper calling and interviewing procedures by the Study Director. This session provided both interviewers and supervisors with an overview of the study and includes a question-by-question review of all items in the survey. Interviewers then completed all survey interviews by telephone through the computer-assisted telephone interviewing (CATI) system. CATI controls the telephone scripts read to individual respondents by displaying the appropriate questionnaire items and their valid response code alternatives in their proper sequence on computer screens at each interviewer's booth. The interviewer then reads each question aloud to the respondent from the screen and enters each respondent's pre-coded answer category through the keyboard directly to a computer disk. All answers are automatically stored in computer memory.

In order to bring hard-to-reach respondents into the survey, up to six attempts (an initial call plus five callbacks) were made to each telephone number selected for inclusion into the sample. Callbacks were made at different times and on different days to increase the probability of finding voters available for the interview. Where possible, appointments are made at specified dates and times to maximize convenience and cooperation rates.

Data Processing

Because CATI itself provides for the direct data entry of responses by the interviewer and does not permit ineligible or invalid data entries, the data file resulting from CATI interviewing is itself virtually error-free. Following this, a final series of data checks were performed by means of a specially designed cleaning program that scrutinizes each respondent record for internally inconsistent information. Once the data were determined to be clean and error-free, the sample was weighted slightly to align it to known estimates of the demographic and regional characteristics of the state's registered voter population. Please note that the bases shown throughout the tabulations in this report are weighted bases and differ slightly from the actual number of respondents interviewed within each subgroup.

Guide to Reading the Tables

The following is an explanation of the detailed statistical tabulations contained in this report:

- The question or questions upon which the data are based is shown at the top of each table
- Tables are percentaged vertically with the raw percentage base appearing at the top of each column.
- The data have been weighted to known parameters of the statewide registered voter population. All percentages and frequencies reported in each table are therefore weighted tabulations.
- In instances where percentages are calculated on small bases (e.g., when the base is fewer than 100 respondents) the reader is urged to interpret the data with caution, since results are subject to relatively large levels of sampling error.
- Throughout the tables an asterisk is used to denote a value of less than 1/2 of 1%. A hyphen indicates zero value. On some tables the percentages may add to more than 100% due to multiple mentions.
- Bases of subgroups used in the tabulations may add to less than the total number of respondents due to some respondents not reporting that characteristic.

Subgroup Definitions

The following are some of the definitions applicable to some of the voter subgroups reported in this volume:

Area

Southern California: Los Angeles, Orange, Riverside, San Bernardino, San Diego, Imperial, Santa Barbara, Ventura, Kern, and San Luis Obispo counties

Northern California: all other 48 California counties

Coastal Counties: San Diego, Orange, Los Angeles, Ventura, Santa Barbara, San Luis Obispo, Monterey, Santa Cruz, San Mateo, San Francisco, Contra Costa, Alameda, Marin, Napa, Solano, Sonoma, Santa Clara, Mendocino, Humboldt and Del Norte counties

Inland counties: all other 38 California counties

Region

Los Angeles: Los Angeles County

San Diego/Orange: San Diego County and Orange counties

Other South: San Bernardino, Riverside, Imperial, Ventura, Santa Barbara, and San Luis Obispo

SF Bay Area: San Francisco, Marin, Napa, Sonoma, Solano, Contra Costa, Alameda, Santa Clara, San Mateo

Central Valley: Butte, Colusa, Fresno, Glenn, Kern, Kings, Madera, Merced, Placer, Sacramento, San Joaquin, Shasta, Stanislaus, Sutter, Tehema, Tulare, Yolo, and Yuba

Other North: Alpine, Amador, Calaveras, Del Norte, El Dorado, Humboldt, Inyo, Lake, Lassen, Mariposa, Mendocino, Monterey, Modoc, Mono, Nevada, Plumas, San Benito, Santa Cruz, Sierra, Siskiyou, Trinity, and Tuolumne

Estimates of Sampling Error

In any survey based on a sampling, there is some sampling error introduced into the data by the process of sampling itself. When the sample has been drawn using random processes, it is possible to apply probability principles to determine the potential range of such error. While survey samples of human populations rarely, if ever, meet all of the criteria theoretically required for the application of these principles, it is customary to use them as an approximation of error that is introduced as a result of sampling. The table below shows the range of error that is associated with samples of various sizes, assuming the use of the 95% confidence level, which is customary for most public opinion surveys.

For example, if 50% of a sample of overall sample of 901 likely voters answered “yes” to a specific question, this statistic would have a sampling error of plus or minus 3.4 percentage points at the 95% confidence level. This means that there is a 95% chance that had the overall population of registered voters statewide been interviewed using the same questionnaire and methods, the results of such a census would yield a result between 46.6 % and 53.4%. The same procedure can be used to estimate the sample error ranges of any other statistic contained in this report.

Approximate <u>sample size</u>	<u>Approximate percentage distribution of replies to question</u>				
	<u>10%</u>	<u>30%</u>	<u>50%</u>	<u>70%</u>	<u>90%</u>
100	+/- 6.0	+/- 9.2	+/- 10.0	+/- 9.2	+/- 6.0
200	+/- 4.3	+/- 6.5	+/- 7.1	+/- 6.5	+/- 4.3
400	+/- 3.0	+/- 4.6	+/- 5.0	+/- 4.6	+/- 3.0
901	+/- 2.0	+/- 3.0	+/- 3.4	+/- 3.0	+/- 2.0

There are many other possible sources of error other than sampling variability in this and any other public opinion survey. Different results could occur because of differences in question wording, sequencing, the rigor with which sampling procedures were implemented, or through undetected errors or omissions in sampling, interviewing or data processing. The overall design and execution of the survey minimized the potential for these other sources of error.

Questions Asked

How would you prefer that the state government deal with its budget deficit, which could range from eight to fifteen billion dollars – mostly through spending cuts or mostly through tax increases?

Do you favor or oppose the requirement that in order to enact new taxes in California both houses of the state legislature must approve of them by a two-thirds majority vote?

Some have proposed changing this rule to allow the legislature to enact new taxes with a simple majority or 50 percent plus one of legislators in both houses so long as they reduce other tax revenues by a similar amount. Do you favor or oppose allowing this change?

As a way to reduce the deficit, the Governor and the state legislature may need to make cuts to various areas of state government spending. I am going to read some of these and for each, please tell me whether you favor or oppose making cuts to this area of state spending. (ITEMS READ IN RANDOM ORDER, ASKING:) Do you favor or oppose making cuts to this area in order to reduce the state budget deficit? (SEE TABLES FOR ITEMS)

Another way to reduce the budget deficit is for state government to increase tax revenues. I am going to read some ways this could be done. For each please tell me whether you favor or oppose it. (ITEMS READ IN RANDOM ORDER, ASKING:) Would you favor or oppose this as a way to reduce the state budget deficit? (SEE TABLES FOR ITEMS)

April 2009 Field Poll

Q.19 How would you prefer that the state government deal with its budget deficit, which could range from eight to fifteen billion dollars -- mostly through spending cuts or mostly through tax increases?
