**Tabulations From a Survey of California Voters about Senators Dianne
Feinstein and Barbara Boxer**

*- prepared for the-
Capitol Alert and the Sacramento Bee*

March 24, 2011

Introduction

This volume presents the statistical data developed from a *Field Poll* survey of registered voters in California about their views about Senators Dianne Feinstein and Barbara Boxer.

The results are based on a *Field Poll* survey completed among a representative sample of 898 registered voters in California conducted by telephone in English and Spanish February 28-March 14, 2011. In order to cover a broad range of issues and still minimize possible respondent fatigue the overall sample was divided into two random sub-samples of 454 and 444 voters each on the questions asked in this survey.

Sampling

The sample was developed from telephone listings of individual voters selected randomly from a listing of statewide voter registration rolls. Once a voter's name and telephone had been selected interviewers are attempted only with the specified voter. Interviews can be conducted on either the voter's landline or cell phone, depending on the source of the telephone listing from the voter file and the preference of the voter.

Prior to the start of data collection, professionally-trained telephone interviewers were briefed with regard to the survey's proper calling and interviewing procedures by the Study Director. This session provided both interviewers and supervisors with an overview of the study and includes a question-by-question review of all items in the survey. Interviewers then completed survey interviews by telephone through the computer-assisted telephone interviewing (CATI) system. CATI controls the telephone scripts read to individual respondents by displaying the appropriate questionnaire items and their valid response code alternatives in their proper sequence on computer screens at each interviewer's booth. The interviewer then reads each question aloud to the respondent from the screen and enters each respondent's pre-coded answer category through the keyboard directly to a computer disk. All answers are automatically stored in computer memory.

In order to bring hard-to-reach respondents into the survey, up to six attempts (an initial call plus five callbacks) were made to each telephone number selected for inclusion into the sample. Callbacks were made at different times and on different days to increase the probability of finding voters available for the interview. Where possible, appointments are made at specified dates and times to maximize convenience and cooperation rates.

Data Processing

The data file resulting from CATI interviewing is itself virtually error-free. Even so, a final series of data checks were performed by means of a specially designed cleaning program that scrutinizes each respondent record for internally inconsistent information. Once the data were determined to be clean and error-free, the overall sample was weighted to align it to its proper statewide proportions by demographic characteristics of the state's registered voter population.

Guide to Reading the Tables

The following is an explanation of the detailed statistical tabulations contained in this report:

- The question or questions upon which the data are based is shown at the top of each table
- Tables are percentaged vertically with the raw percentage base appearing at the top of each column.
- The data have been weighted to known parameters of the statewide registered voter population. All percentages and frequencies reported in each table are therefore weighted tabulations.
- In instances where percentages are calculated on small bases (e.g., when the base is fewer than 100 respondents) the reader is urged to interpret the data with caution, since results are subject to larger levels of sampling error.
- Throughout the tables an asterisk is used to denote a value of less than 1/2 of 1%. A hyphen indicates zero value. On some tables the percentages may add to more than 100% due to multiple mentions.
- Bases of subgroups used in the tabulations may add to less than the total number of respondents due to some respondents not reporting that characteristic.

Subgroup Definitions

The following are some of the definitions applicable to some of the voter subgroups reported in this volume:

Area

Southern California: Los Angeles, Orange, Riverside, San Bernardino, San Diego, Imperial, Santa Barbara, Ventura, Kern, and San Luis Obispo counties

Northern California: all other 48 California counties

Coastal Counties: San Diego, Orange, Los Angeles, Ventura, Santa Barbara, San Luis Obispo, Monterey, Santa Cruz, San Mateo, San Francisco, Contra Costa, Alameda, Marin, Napa, Solano, Sonoma, Santa Clara, Mendocino, Humboldt and Del Norte counties

Inland counties: all other 38 California counties

Region

Los Angeles: Los Angeles County

San Diego/Orange: San Diego County and Orange counties

Other South: San Bernardino, Riverside, Imperial, Ventura, Santa Barbara, and San Luis Obispo

SF Bay Area: San Francisco, Marin, Napa, Sonoma, Solano, Contra Costa, Alameda, Santa Clara, San Mateo

Central Valley: Butte, Colusa, Fresno, Glenn, Kern, Kings, Madera, Merced, Placer, Sacramento, San Joaquin, Shasta, Stanislaus, Sutter, Tehema, Tulare, Yolo, and Yuba

Other North: Alpine, Amador, Calaveras, Del Norte, El Dorado, Humboldt, Inyo, Lake, Lassen, Mariposa, Mendocino, Monterey, Modoc, Mono, Nevada, Plumas, San Benito, Santa Cruz, Sierra, Siskiyou, Trinity, and Tuolumne

Estimates of Sampling Error

In any survey based on a sampling, there is some sampling error introduced into the data by the process of sampling itself. When the sample has been drawn using random processes, it is possible to apply probability principles to determine the potential range of such error. While survey samples of human populations rarely, if ever, meet all of the criteria theoretically required for the application of these principles, it is customary to use them as an approximation of error that is introduced as a result of sampling. The table below shows the range of error that is associated with samples of various sizes, assuming the use of the 95% confidence level, which is customary for most public opinion surveys. For example, if 50% of the overall sample of 898 registered voters answered “yes” to a specific question, this statistic would have a sampling error of plus or minus 3.4 percentage points at the 95% confidence level. This means that there is a 95% chance that had the overall population of registered voters statewide been interviewed using the same questionnaire and methods, the results of such a census would yield a result between 46.6% and 53.4%. The same procedure can be used to estimate the sample error ranges of any other statistic contained in this report.

Approximate <u>sample size</u>	<u>Approximate percentage distribution of replies to question</u>				
	<u>10%</u>	<u>30%</u>	<u>50%</u>	<u>70%</u>	<u>90%</u>
100	+/- 6.0	+/- 9.2	+/- 10.0	+/- 9.2	+/- 6.0
300	+/- 3.5	+/- 5.3	+/- 5.8	+/- 5.3	+/- 3.5
400	+/- 3.0	+/- 4.6	+/- 5.0	+/- 4.6	+/- 3.0
900	+/- 2.0	+/- 3.0	+/- 3.4	+/- 3.0	+/- 2.0

There are many other possible sources of error other than sampling variability in this and any other public opinion survey. Different results could occur because of differences in question wording, sequencing, the rigor with which sampling procedures were implemented, or through undetected errors or omissions in sampling, interviewing or data processing. The overall design and execution of the survey minimized the potential for these other sources of error.

Questions Asked

Do you approve or disapprove of the way Dianne Feinstein is handling her job as U.S. Senator?

Dianne Feinstein's term in the U.S. Senate ends in 2012. Suppose Senator Feinstein runs for re-election next year. If the election were being held today, would you be inclined or not inclined to vote to re-elect Feinstein to the U.S. Senate?

Do you approve or disapprove of the way Barbara Boxer is handling her job as U.S. Senator?

March 2011 Field Poll

Q.07 Do you approve or disapprove of the way Barbara Boxer is handling her job as U.S. Senator?
